

What to Show the Oral Translator on the Tablet

Turn on the tablet:

Press the smaller button on the side of the tablet.

- If the tablet is in sleep mode – only a quick press is necessary.
- If the tablet is off – a hold press will be necessary.

How to open and minimize the program:

The translator needs to know how to open, close and recover a minimized program. Demonstrate the following and then have them do each of the steps.

- Point to the BTT Recorder icon on the home screen. 
- Do the following in order.
 - **Open the program** - Show how to tap once on the icon to open the program.
 - **Minimize the Program** - Tap on the back arrow icon to minimize the program and return to the home screen.
 - **Open program from Open Applications List** - Tap on the square icon to show the program is still open. The program is showing in a cascading list of programs or as the program in a smaller window. Tap on the program to reopen the program.
 - **Minimize the Program** - Tap on the home icon to minimize the program's window.
- Have the translator do the same steps.

Show the MTT how to use the microphone and ear-plugs/headset.

Help the translator set up their User ID and a new Project.

- Finding the source audio may be difficult for non-English readers. Once the path for the source audio on the tablet is found; BTT Recorder will “return” to that place for additional projects.

Demonstrate the steps of recording on page 18 of the Manual *BTT Recorder Manual 1.4*.

- Or, go to <https://btt-recorder.readthedocs.io/en/latest/recording.html> for directions.
